

CONTEXT-AWARE BIBLE VERSE RETRIEVAL AND DISPLAY SYSTEM USER MANUAL

A practical guide for preachers and media operators

Supported Bible Versions: KJV BBE TWI

English and Twi speech support
Voice navigation • Direct reference • Semantic retrieval
Operator preview and live display

1. INTRODUCTION

This manual explains how to use the Context-Aware Bible Verse Retrieval and Display System during a live sermon. It focuses on how to speak Bible references and navigation commands, how to change Bible versions, and how the operator reviews and displays detected verses.

WHAT THE SYSTEM SUPPORTS

- Live sermon audio through a connected microphone.
- English speech recognition with online processing and a local fallback.
- Twi speech recognition through the local Twi processing path.
- Direct Bible-reference detection.
- English semantic retrieval for sermon statements and paraphrases.
- KJV, BBE and TWI Bible versions.
- Voice navigation, manual verse search and manual override.
- Preview before sending a verse to the congregation display.

NOTE: Twi semantic paraphrase search is not used in the current system. For TWI, use explicit references and sequential verse tracking.

WHO SHOULD USE THIS MANUAL

- Preacher/Speaker: uses clear Bible references and navigation expressions.
- Media Operator: monitors the transcript, checks detections, previews verses and controls the live display.

2. How to Speak to the System

General speaking guidelines

- Speak clearly and at a moderate pace.
- Give one main Bible reference or navigation command at a time.
- Use the standard Bible book name when giving a reference.
- Say the chapter and verse numbers clearly.
- If a reference is missed, repeat it instead of continuing with several commands at once.
- For Twi, pronounce the Bible book name and number expressions as clearly as possible.

Recommended reference format

Language	Recommended pattern	Example
English	Book + chapter + verse	John chapter 3 verse 16
Twi	Book + ti + number + nkyekyemu + number	Yohane ti mmiensa nkyekyemu du nsia

English Bible references

- Say: “John chapter 3 verse 16.”
- Say: “Romans chapter 8 verse 28.”
- A direct reference can be given again whenever a new passage is needed.

Twi Bible references

- Use “ti” for chapter and “nkyekyemu” for verse.
- Example: “Yohane ti mmiensa nkyekyemu du nsia” → John 3:16.
- The system supports Twi number expressions and Twi Bible book names.

NOTE: The TWI language-specific reference vocabulary is active when the TWI Bible version is selected.

3. Voice Navigation and Verse Progression

After a verse has been identified, the system stores the current scripture position. This allows the preacher or operator to move through the passage without repeating the full book and chapter.

Say	Action	Example
Next verse	Move forward one verse	John 3:16 → John 3:17
Previous verse	Move back one verse	John 3:17 → John 3:16
Last verse	Move to the last verse of the active passage/chapter	Use when finishing the current sequence
Verse 17	Direct jump within the active context	John 3:16 → Verse 17

Navigation examples

Start with: “John chapter 3 verse 16.”

Then say: “Next verse.”

Say: “Previous verse” if you need to return.

Say: “Verse 21” to jump directly within the active context.

Say: “Last verse” when you want to move to the end of the current sequence.

Important

- Navigation uses the current scripture position stored by the system.
- You do not need to repeat the complete book and chapter for every next/previous command.
- If the wrong passage is active, give a complete new Bible reference.

4. Changing Bible Versions

The system currently provides three Bible versions:

Version	Use
KJV	King James Version
BBE	Bible in Basic English
TWI	Twi Bible version

Voice version switching

“Switch to KJV.”

“Switch to BBE.”

“Switch to TWI.”

When a supported version is selected, the system changes the active Bible version and uses it for subsequent scripture retrieval.

Example workflow

Display John 3:16 in KJV.

Say: “Switch to BBE.”

Give the next Bible reference or navigation command.

Say: “Switch to TWI” when you want to use the Twi Bible.

When returning to English, say: “Switch to KJV” or “Switch to BBE.”

NOTE: Twi-specific book-name matching is intended for TWI mode. When an English version is active, use English Bible book names for direct references.

5. Operator Workflow

The operator controls what is finally shown to the congregation.

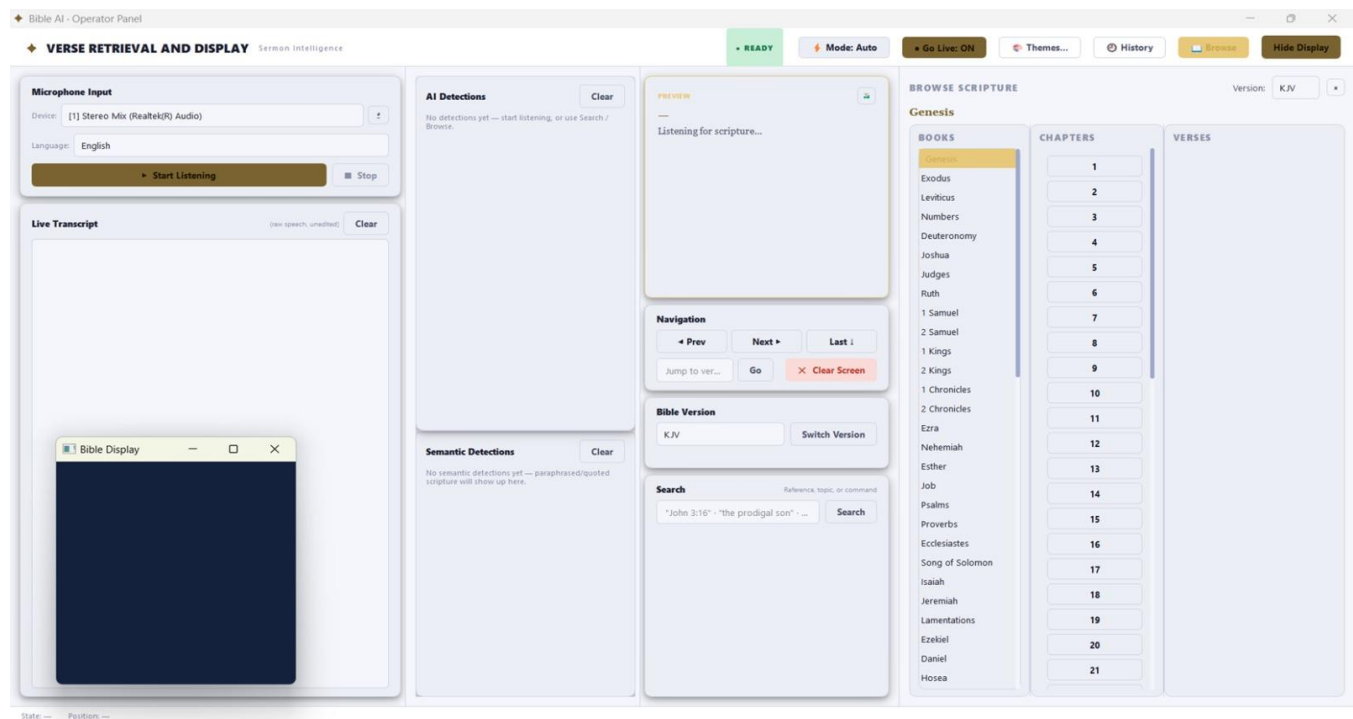

Figure 1: Operator interface from the project build.

Basic operating steps

1. **Connect the microphone** and select the correct audio input under **Microphone Input**.
2. **Select the language** required for the sermon.
3. Click **Start Listening** to begin capturing and processing speech.
4. Monitor the **Live Transcript** and **AI/Semantic Detections** for detected scripture.
5. When a verse is detected, choose how it should be displayed:
 - **Automatic:** Use **Go Live / Push to Live** to send the selected verse directly to the congregation display.
 - **Preview First:** Review the verse in the **Preview** panel before sending it live.
6. Use **Navigation** controls such as **Previous**, **Next**, **Last** , or **Jump to Verse** to move between verses.
7. **Search** or **Browse Scripture** to manually find a verse when needed.
8. Use **Clear Screen** to remove the current verse from the congregation display.

9. Use **Hide Display** when the congregation display needs to be temporarily hidden.

Main Interface Areas

- **Microphone Input** – Select the audio device, choose the language, and start or stop listening.
- **Live Transcript** – Displays the speech recognized by the system in real time.
- **AI Detections** – Shows Bible verses identified from direct scripture references.
- **Semantic Detections** – Shows relevant verse suggestions from English sermon statements or paraphrases.
- **Preview** – Allows the operator to review a selected verse before displaying it.
- **Navigation** – Provides **Previous**, **Next**, **Last**, and **Jump to Verse** controls.
- **Bible Version** – Select and change between **KJV**, **BBE** and **TWI**.
- **Search** – Manually search for a verse, reference, topic, or command.
- **Browse Scripture** – Manually select a **book**, **chapter**, and **verse**.
- **Go Live** – Sends the selected verse directly to the congregation display when automatic display is preferred.
- **Preview → Go Live** – Allows the operator to check the verse before displaying it.
- **Clear Screen** – Removes the displayed verse from the congregation screen.
- **Open Display** – Opens the separate Bible Display window.

- **Hide Display** – Temporarily hides the congregation display.

6. Manual Search and Error Handling

When automatic detection is correct

- Select the suggested verse.
- Check the Preview.
- Push the approved verse to Live.

When the wrong verse is detected

- Do not immediately push the detected verse to Live.
- Use the Preview to verify the passage.
- Use manual search or direct verse jump to select the correct verse.
- Push the corrected verse to Live.

When a reference is not detected

- Repeat the reference clearly.
- Use the complete book, chapter and verse.
- Check that the correct Bible version is active.
- For TWI, make sure TWI is selected before using Twi book names.
- Use manual search if automatic detection still does not return the desired verse.

When navigation does not give the expected verse

- Check the current active verse.
- If necessary, give a complete new reference to reset the scripture position.
- Confirm the selected Bible version.
- Use the manual Browse Scripture controls as a fallback.

Good practice during a live sermon

- Keep the microphone audio clear.
- Avoid giving several unrelated commands in one sentence.
- Always verify the Preview before projection.
- Keep manual search available as a backup.

7. Quick Reference Sheet

Keep this page beside the media operator during a sermon.

Purpose	Say / Do
Open a passage	“John chapter 3 verse 16”
Twi reference	“Yohane ti mmiensa nkyekyemu du nsia”
Next	“Next verse”
Previous	“Previous verse”
Last	“Last verse”
Direct jump	“Verse 17” or give a complete reference
Change version	“Switch to KJV / BBE / TWI”
Manual recovery	Use Search or Browse Scripture
Approve display	Check Preview → Push to Live
Remove display	Clear Screen

Final reminders

- Speak clearly.
- Use complete references when starting a new passage.
- Use navigation commands after a verse is active.
- Select TWI before using Twi scripture references.
- Check the Preview before sending a verse live.
- Use manual search whenever automatic detection is uncertain.

System coverage

- Bible versions: KJV, BBE and TWI.
- English direct references and semantic retrieval.
- Twi direct references and sequential verse tracking.
- Voice navigation and version switching.
- Operator-controlled preview and congregation display.
